Mastering the TOGAF Standard: Book Summary Guide

Summary Guide, based on Mastering the TOGAF Standard by Eric Jager (2025), Chapters 1-22 (pp. 1-829)

About the Book

Mastering the TOGAF Standard (Eric Jager, 2025) is a practical companion to The Open Group's TOGAF Standard, 10th Edition (including Technical Corrigendum 1, 2025). Jager's premise is that TOGAF is "a very applicable framework" that is poorly applied, because it explains the *what* far better than the *how* (Ch. 1, pp. 2, 6). The book covers the Standard's **Fundamental Content** plus the Series Guides that matter in practice. It explains each concept in plain language, adds step-by-step boxes, and illustrates everything with a fictional healthcare organization (Ch. 1, pp. 3-4, 9; Ch. 5.1.1, p. 67).

> **How to use this guide:** Each chapter has its own detailed study guide. This document is the bird's-eye view: what each chapter says, how the chapters group together, and what the book as a whole wants you to remember. For how the concepts connect *across* chapters, see the companion guide "Connecting the Concepts". Page numbers refer to the book.

The book in one paragraph

TOGAF "boils down to the establishment and implementation of the Architecture Capability", carried out by roles using skills and competencies (Ch. 1, p. 4). An organization defines what EA means for it (Ch. 4). It tailors TOGAF's **Enterprise Metamodel** (Ch. 5) and **Content Framework** (Ch. 6), and stores reusable **building blocks** in an **Architecture Repository** (Ch. 7). It establishes **governance** with a strategic **Architecture Board** (Ch. 8), positions its **Architecture Capability** (Ch. 9), and staffs it with the right **roles** (Ch. 10) across the four **domains** (Ch. 11). It then runs the **Architecture Development Method** (Ch. 12), iterating and partitioning as needed (Ch. 13) and using recurring **techniques** (Ch. 14). It measures and grows **maturity** (Ch. 15), aligns with other frameworks (Ch. 16), and **tailors everything** (Ch. 17). The same approach supports **agile** delivery (Ch. 18) and **digital transformation** (Ch. 19). A full case (Ch. 20) and a one-page map (Ch. 21) show it all working together, and the book closes by busting seven myths (Ch. 22).

Reading tours

Tour	Purpose	Chapters
PINK	The very basics	1, 2, 3, 4, 11, 12, 22
GREEN	The major concepts	3-14, 17, 20
BLUE	Dive into the details	5, 12, 13, 14, 16, 17, 18, 19
GOLD	Content not easily found elsewhere	2, 5, 6, 9, 10, 15, 17, 20, 21

(Ch. 1.3, pp. 9-11; tour membership from each chapter's opening page)

The Book's Big Ideas

#	Big idea	Where it is made
1	**Tailoring is a must.** Use only what adds value. The concepts are the "essential scaffolding" and everything else is an example	Ch. 1, p. 5; Ch. 3.6, p. 52; Ch. 5.2, p. 106; Ch. 17, p. 715
2	**EA is a strategic business management tool, not a technical instrument.** EA is not IT Architecture	Ch. 4.2, p. 57; Ch. 9.3, p. 236; Ch. 15.1, p. 670
3	**The ADM is a method, not a process.** It is iterative, there is no fixed order, and steps can be skipped	Ch. 12, p. 295; Ch. 12.13, pp. 547-548; Ch. 13.3, p. 565
4	**Everything traces back to goals.** Drivers, goals, objectives, requirements, work packages, roadmap, progress	Ch. 5.1.2, pp. 77-80; Ch. 12.8.3, p. 491; Ch. 20, p. 784
5	**Position the capability high.** A CEO-led board and a high reporting line make architecture strategic and proactive	Ch. 8.3, pp. 205-208; Ch. 9.3, pp. 239-241
6	**Reuse through the repository.** Store building blocks, not solution diagrams. Reuse via the continua	Ch. 7.1, p. 128; Ch. 7.3, pp. 136-149
7	**People make or break it.** Stakeholders, sponsorship, readiness, and communication	Ch. 8.3.2, p. 210; Ch. 14.3, 14.7; Ch. 19, p. 769
8	**TOGAF fits modern practice.** Agile, digital transformation, other frameworks	Ch. 16-19; Ch. 22, pp. 826-827

Part-by-Part Summary

The book has no formal "parts". The grouping below is this guide's own, to make the flow easier to see.

Part I: Foundations (Chapters 1-4)

Chapter	Summary	Key takeaways
1. Introduction (pp. 1-12)	Why the book exists, who it is for, how to read it	TOGAF in a nutshell is the Architecture Capability (p. 4). Four steps: understand needs, design, plan, govern (pp. 4-5). Tailoring is a must (p. 5). Jager accepts that TOGAF says *what*, not *how* (p. 6). Four reading tours (pp. 9-11)
2. Preliminary Notes (pp. 13-30)	History of EA and of TOGAF, from TAFIM (1995) to the 10th Edition (2022) and TC1 (2025)	EA moved from IT-focused to strategic (p. 16). Preliminary Phase added in TOGAF 8 (p. 22). Content Framework and Repository in TOGAF 9 (p. 24). TC1 removed the ADM arrowheads to stress iteration (p. 25). TAFIM-to-ADM phase mapping (p. 28)
3. The TOGAF Standard (pp. 31-52)	What the Standard is made of	Six Fundamental Content documents (p. 36). Series Guides (pp. 40-42). TOGAF Library (pp. 43-45). Structure mirrors the Architecture Capability with the ADM at its heart (pp. 33-34). Seven advantages (pp. 46-50). Modular adoption (pp. 39-40)
4. Architecture Definition (pp. 53-62)	What EA is	ISO/IEC/IEEE 42010:2022-based definition (p. 54). Three definitions in one standard: ISO, Gartner, FEAPO (pp. 58-61). Missing link to business objectives (p. 55). EA is not IT Architecture (p. 57). Define EA for your own organization (p. 61)

Part II: Architecture Content (Chapters 5-7)

Chapter	Summary	Key takeaways
5. Enterprise Metamodel (pp. 63-110)	The entities in which all content is rooted	Five sections, 36 entities (8 general, 19 business, 3+3+3) (p. 108). Capability vs. business capability (p. 73). Value stream vs. process (pp. 80-82). Business service as the hinge (p. 91). Service, then logical component, then physical component pattern (pp. 93-101). Tailor it in the Preliminary Phase. Jager suggests adding *stakeholder* (pp. 101-106)
6. Content Framework (pp. 111-126)	The categorization framework mapping work products to ADM phases	Five purposes (pp. 113-114). Sections mapped to phases: Principles/Vision/Requirements, B, C, D, Realization (E-G), Change (H) (pp. 118-119). Extended Content Framework shows entities (pp. 120-122). Work Package Portfolio Map recommended (p. 124)
7. Architecture Repository (pp. 127-187)	The intangible hub that stores architecture assets	Components: metamodel, Architecture and Solutions Landscapes, requirements, Reference and Standards Libraries, Governance Repository, capability (pp. 129-136). Three continua with four types each (pp. 136-149). Catalog, map, diagram, matrix (pp. 150-154). ABB vs. SBB (pp. 170-175). Views vs. viewpoints (pp. 176-178). Tool selection (pp. 179-183)

Part III: Capability, Governance, and People (Chapters 8-11)

Chapter	Summary	Key takeaways
8. Architecture Governance (pp. 189-227)	Controlling and steering architecture	Governance Framework (pp. 190-192). Ten steps to implement governance (pp. 193-204). The Architecture Board is a boardroom-level, strategic body (p. 205). CEO vs. CIO/CTO leadership (pp. 206-208). 4-5 members (p. 213). Ten steps to set up a board (pp. 215-224)
9. Architecture Capability (pp. 229-245)	Building and positioning the ability to practice EA	Created like any capability, via the ADM (Table 9-1) (pp. 230-236). An ongoing discipline (p. 231). Four purposes: strategy, portfolio, projects, solution delivery (p. 237). A higher reporting line means more strategic work (pp. 239-241)
10. Roles, Skills, and Competencies (pp. 247-278)	Who does architecture	Job vs. role vs. assignment (p. 248). Chief/Enterprise, Segment, Solution Architects (pp. 251-255). Horizontal vs. vertical segments (pp. 255-263). Skill categories and four proficiency levels (pp. 265-266). Jager's ten competencies (pp. 268-275)
11. Architecture Domains (pp. 279-294)	Business, Data, Application, Technology	A complete EA covers all four (p. 285). Domains vs. layers (pp. 287-289). Cross-cutting concerns: security, motivation, governance (pp. 288-289). Roles mapped to domains (pp. 289-292)

Part IV: The Method (Chapters 12-14)

Chapter	Summary	Key takeaways
12. Architecture Development Method (pp. 295-560)	Every phase: objectives, steps, artifacts	Ten phases (pp. 297-299). Four key documents: Request, Statement, ADD, Contract (pp. 300-305). Preliminary (pp. 305-323). A (pp. 324-347). B (pp. 347-398). C (pp. 398-441). D (pp. 441-459). E with the roadmap (pp. 459-494). F (pp. 495-513). G with progress measurement (pp. 513-528). H (pp. 528-539). Requirements Management (pp. 539-547). "In short" summary (pp. 547-557)
13. Applying the ADM (pp. 561-587)	Styles, iteration, partitioning	Adapt models, views, and tools for styles (p. 563). Three ways to iterate (p. 566). Four iteration groups (pp. 573-574). Baseline first vs. target first (pp. 576-577). Partitioning settled in the Preliminary Phase (pp. 580-583)

Chapter	Summary	Key takeaways
14. ADM Techniques (pp. 589-668)	Eight reusable techniques	Principles (Name, Statement, Rationale, Implications; five criteria) (pp. 592-601). Stakeholder Management (Power Grid, Communications Plan) (pp. 601-615). Patterns (pp. 616-617). Gap analysis matrix (pp. 617-622). Interoperability degrees 1-4 (pp. 623-627). Readiness assessment (pp. 627-632). Risk management (impact x frequency, heat map) (pp. 632-656). Alternatives and trade-offs (pp. 656-662)

Part V: Maturing and Adapting (Chapters 15-17)

Chapter	Summary	Key takeaways
15. Architecture Maturity Models (pp. 669-700)	Measuring and raising maturity	ACMM: nine elements, levels 0-5, IT-oriented (pp. 671-681). CMMI: five elements, levels 1-5, preferred for EA (pp. 681-689). Raise maturity per element (pp. 690-695). Needs several roles (p. 698)
16. Alignment with Other Frameworks (pp. 701-711)	Fitting TOGAF with what exists	Precedence, commitment, fit (pp. 701-702). Framework catalog steps (p. 702). The EA Implementation Wheel (Document, Define, Execute, Control) mapped to the ADM (pp. 703-710)
17. Tailoring the TOGAF Standard (pp. 713-723)	Customization in one place	Five tailoring areas (pp. 714-716). "Concepts are the essential scaffolding" (p. 715). Healthcare case: HIPAA, FHIR, phase prioritization, regulatory gates (pp. 719-722)

Part VI: Modern Practice (Chapters 18-19)

Chapter	Summary	Key takeaways
18. Agile Architecture (pp. 725-756)	TOGAF in agile delivery	Partitions, sprints, Minimum Viable Architecture (pp. 727-728). Strategic, Segment, Capability levels mapped to SAFe (pp. 731-742). Partitioned transitions (pp. 737-739). Phases E-H adapted for sprints (pp. 744-754)
19. Digital Transformation (pp. 757-779)	ADM-guided transformation	Digitization vs. digitalization vs. transformation (p. 760). Business-led and hybrid with EA (pp. 761-762). Nine ADM-based steps (pp. 763-768). Hospital case: five phases, 30% cost reduction (pp. 768-777)

Part VII: Synthesis (Chapters 20-22)

Chapter	Summary	Key takeaways
20. Putting the TOGAF Standard into Practice (pp. 781-815)	End-to-end case: Jim at Academic Diagnostic Medicine (2027-2030)	Seven stages with the artifacts used (pp. 782-808). Mapped to ADM phases (pp. 808-815). Tailored: skipped maturity, added a risk entity (p. 809). Used only what added value (p. 815)
21. The TOGAF Standard on a Page (pp. 817-822)	One-page concept map	Thirteen relationships among the metamodel, Content Framework, ADM, domains, roles, governance, repository, building blocks, and artifacts (pp. 818-821)
22. Closing Remarks (pp. 823-829)	Myths and purpose	Seven myths busted (pp. 824-828). Four reasons for writing (p. 829)

ADM at a Glance

Phase	Objective (Ch. 12.1)	Main outputs and artifacts	Detailed in
Preliminary	Determine and establish the Architecture Capability	Request for Architecture Work, principles, tailored framework, team, governance	Ch. 12.3; Ch. 9.2

Phase	Objective (Ch. 12.1)	Main outputs and artifacts	Detailed in
A Architecture Vision	High-level vision and stakeholder alignment	Statement of Architecture Work, Stakeholder Catalog, Solution Concept Diagram, Business Capability Map	Ch. 12.4
B Business	Target Business Architecture and roadmap components	Capability maps, value streams, organization map, about 27 artifacts, ADD	Ch. 12.5
C Information Systems	Target Data and Application Architectures	Data and application catalogs, matrices, diagrams	Ch. 12.6
D Technology	Target Technology Architecture	Technology standards and portfolio, platform diagrams	Ch. 12.7
E Opportunities and Solutions	Work packages, transitions, SBBs	Implementation Factor Catalog, Consolidated Gaps Matrix, Architecture Roadmap	Ch. 12.8
F Migration Planning	Detailed implementation plan	Implementation and Migration Plan, Business Value and Risk Matrix, State Evolution Table	Ch. 12.9
G Implementation Governance	Ensure adherence and assess progress	Architecture Contract, compliance reviews, progress dashboards	Ch. 12.10; Ch. 8
H Change Management	Assess change, keep the architecture current	Compliance Report, change requests, new Request for Architecture Work	Ch. 12.11
Requirements Management	Continuous requirements handling	Requirements Catalog	Ch. 12.12

Numbers Worth Remembering

Number	What	Where
6	Fundamental Content documents	Ch. 3.2, p. 36
36	Foundation Enterprise Metamodel entities (8 + 19 + 3 + 3 + 3)	Ch. 5.3, p. 108
3 x 4	Continua, each with four types (Foundation, Common Systems, Industry, Organization-Specific)	Ch. 7.3, pp. 141-149
3	Architecture Landscape levels (Strategic, Segment, Capability)	Ch. 7.2, p. 130
4	Architecture Purpose Capabilities (strategy, portfolio, projects, solution delivery)	Ch. 9.3, p. 237
3 (+1)	Core roles (Enterprise, Segment, Solution), plus the Chief Architect specialization	Ch. 10.2, p. 251
4	Core domains	Ch. 11.1, p. 280
10	ADM phases (including Preliminary and Requirements Management)	Ch. 12.1, p. 296
4	Key ADM documents	Ch. 12.2, pp. 300-301
3 / 4	Ways to iterate / iteration groups	Ch. 13.3, pp. 566, 573
8	ADM techniques	Ch. 14.1, p. 591
4	Degrees of interoperability	Ch. 14.6, p. 624
9 / 5	ACMM elements / CMMI elements	Ch. 15.1, pp. 671, 682
10 + 10	Steps to implement governance and steps to set up an Architecture Board	Ch. 8.2, 8.3.5
4-5	Recommended Architecture Board members (never more than 10)	Ch. 8.3.4, p. 213
7	Myths	Ch. 22, p. 824

The Standard vs. Jager's Additions

Knowing which ideas are TOGAF and which are Jager's matters when citing in assessed work.

Jager's addition or opinion	Where
The Standard's EA definition lacks a link to business objectives	Ch. 4.1, p. 55
Add a *stakeholder* entity (and others) to the metamodel	Ch. 5.2, pp. 104-105; Ch. 12.4.2, pp. 337-338
The "Motivation" section in the Extended Content Framework is an inconsistency	Ch. 6.3, p. 121
Storage locations of ABBs and SBBs in the repository	Ch. 7.5.2.4-7.5.2.5, pp. 172, 175
Add the CEO to the Governance Framework. The CIO belongs on the business side	Ch. 8.1, pp. 192-193; Ch. 8.3, p. 206
The ten governance steps and ten board steps	Ch. 8.2, 8.3.5
Ten architect competencies	Ch. 10.4, pp. 268-275
Work Package Portfolio Map and Architecture Roadmap as Phase E artifacts	Ch. 6.4, p. 124; Ch. 12.8.3, p. 488
Some "techniques" are not real techniques	Ch. 14.1, pp. 590-591
Prefer CMMI over ACMM for EA	Ch. 15.1.1, p. 681
The EA Implementation Wheel	Ch. 16.2
The seven myths and their rebuttals	Ch. 22

Book-Level Self-Check Questions

Q: In one sentence, what does TOGAF boil down to according to Jager?

A: Establishing and implementing the Architecture Capability, carried out by architecture roles using skills and competencies (Ch. 1, p. 4).

Q: Name the six Fundamental Content documents and the chapters that cover them.

A: Introduction and Core Concepts (Ch. 4-7, 11), ADM (Ch. 12), ADM Techniques (Ch. 14), Applying the ADM (Ch. 13), Architecture Content (Ch. 5-7), EA Capability and Governance (Ch. 8-10) (Ch. 3.2, pp. 36-39).

Q: How do the Enterprise Metamodel, Content Framework, and ADM relate?

A: The ADM's Preliminary Phase tailors the metamodel. The metamodel feeds the Content Framework. The Content Framework's deliverables are produced in the ADM phases, which may in turn update both (Ch. 5.2, pp. 101-105; Ch. 6.4; Ch. 21, p. 818).

Q: Why should the Architecture Board include senior executives?

A: Architecture decisions are strategic. A board of IT architects leaves strategic decisions outside the Architecture Capability, which then stays reactive (Ch. 8.3, pp. 205-206).

Q: What makes an EA "complete"?

A: Addressing all four domains: Business, Data, Application, Technology (Ch. 11.1, p. 285).

Q: How do Phases B, C, and D differ in their steps?

A: Barely. They share the same steps (select references, Baseline and Target, gap analysis, roadmap components, impacts, review, finalize, ADD) applied to different domains (Ch. 12.6.1, p. 402).

Q: Which chapters show TOGAF supporting agile and digital transformation, and through what concept?

A: Chapters 18 and 19, mainly through architecture partitioning and the three levels of granularity, and through ADM-guided, business-led transformation (Ch. 18.1-18.4; Ch. 19.3).

Q: Which chapter best demonstrates the whole framework in action?

A: Chapter 20, the Academic Diagnostic Medicine case, mapped back to every ADM phase in Section 20.2.

Q: What are the seven myths Jager refutes?

A: Only for large organizations; rigid and prescriptive; only IT; replaces other frameworks; outdated; just documentation; the ADM must be followed step by step (Ch. 22, p. 824).
