Connecting the Concepts: Study Guide

Study Guide, based on Mastering the TOGAF Standard by Eric Jager (2025), Chapters 1-22. References are written as Chapter.Section (page).

How to Use This Guide

The chapter guides explain each chapter on its own. This guide does the opposite: it follows **one idea at a time across the whole book**, so you can see how the pieces fit together. Every concept is tagged with where it is **defined** and where it is **used**, in the form *Ch. X.Y (p. N)*.

Work through it in this order:

1. **The Big Picture**: the six questions the book answers, and which chapters answer them.
2. **Nine Threads**: the major storylines that run through several chapters.
3. **The ADM as the Backbone**: every phase with the concepts, techniques, and artifacts it pulls in.
4. **Commonly Confused Pairs**: concepts that sound alike but differ.
5. **Concept Index**: A-Z lookup of where each concept is defined and used.
6. **Linking Questions**: practice questions that require more than one chapter.

> **Tip for assessed work:** When you cite a concept, use the chapter where it is *defined* (first column of the index). Mention the chapters where it is *applied* to show you understand how it connects.

Part 1: The Big Picture

The book answers six questions. Read each row as a layer that builds on the one above.

Question	Concept cluster	Main chapters
Why does EA exist, and what is TOGAF?	EA definition, history, the Standard's structure, strategic purpose	Ch. 1, 2, 3, 4
What is architecture made of?	Enterprise Metamodel, Content Framework, Repository, building blocks, artifacts, domains	Ch. 5, 6, 7, 11
Who does it, and under whose authority?	Architecture Capability, roles, governance, Architecture Board	Ch. 8, 9, 10
How is it developed?	ADM, iteration, partitioning, techniques	Ch. 12, 13, 14
How well, and **how adapted**?	Maturity, other frameworks, tailoring	Ch. 15, 16, 17
Where is it applied today?	Agile, digital transformation, full case, one-page map	Ch. 18, 19, 20, 21 (and 22)

The book's own one-page map (Ch. 21.1, pp. 818-821) links the core concepts like this:

From	Relationship	To	Ref
ADM (Preliminary Phase)	creates	Enterprise Metamodel	Ch. 21.1 (p. 818); Ch. 5.2 (p. 101); Ch. 12.3.1 (p. 317)
Enterprise Metamodel	specifies entities used as	Building blocks	Ch. 21.1 (p. 818); Ch. 7.5.2 (p. 165)
Enterprise Metamodel	realizes	Content Framework	Ch. 21.1 (p. 818); Ch. 6.1 (p. 113)

From	Relationship	To	Ref
Content Framework	complements (and is updated by)	ADM	Ch. 21.1 (p. 818); Ch. 6.3-6.4 (pp. 119, 123)
ADM (B, C, D)	develops content for	Four domains	Ch. 21.1 (p. 819); Ch. 11.1 (p. 280)
Domains	need corresponding	Roles (Segment Architect)	Ch. 21.1 (p. 819); Ch. 10.3.1 (p. 259); Ch. 11.3 (p. 291)
Governance Framework	governs	Roles	Ch. 21.1 (p. 819); Ch. 8.1 (p. 191)
Governance Framework	enables	ADM and Repository	Ch. 21.1 (p. 819); Ch. 8.1 (p. 192)
Architecture Repository	stores	Artifacts, building blocks, metamodel	Ch. 21.1 (pp. 819-820); Ch. 7.2 (pp. 129-136)
Building blocks	are used to create	Catalogs, diagrams, maps, matrices, i.e., artifacts	Ch. 21.1 (p. 820); Ch. 7.4 (p. 150)

Part 2: Nine Threads Through the Book

Thread 1: From Strategy to Results (the "golden thread")

This thread answers *how does a strategy become measurable change?* It is the book's most important storyline, because Jager insists EA must connect to business goals (Ch. 4.1, p. 55).

Step	Concept	Defined in	Used in
1	**Driver**: a condition motivating goals. Stakeholder drivers are *concerns*	Ch. 5.1.2 (p. 77)	Ch. 12.3.1 (p. 308) find drivers in strategy documents; Ch. 3.1 (p. 34) business needs update drivers; Ch. 19.3 (p. 764) transformation drivers
2	**Goal**: qualitative intent	Ch. 5.1.2 (p. 77)	Ch. 12.4.1 (p. 330) validated in Phase A; Ch. 12.5.3 (p. 371) Driver/Goal/Objective Catalog
3	**Objective**: SMART aim	Ch. 5.1.2 (p. 77)	Ch. 12.8.3 (p. 491) roadmap built on SMART objectives; Ch. 20.1.7 (p. 807) objectives heat-mapped
4	**Measure / KPI**	Ch. 5.1.2 (p. 78)	Ch. 12.4.1 (p. 333) value propositions and KPIs; Ch. 8.2 (pp. 200-201) governance KPIs
5	**Course of action**: what the organization decided to do	Ch. 5.1.2 (p. 79)	Ch. 18.4.1 (p. 741) strategic-level courses of action in agile
6	**Principles** frame the objectives	Ch. 5.1.1 (p. 68); Ch. 14.2 (pp. 592-601)	Ch. 12.3.1 (p. 316) set in Preliminary; Ch. 12.3.2 (p. 320) Principles Catalog
7	**Requirement**: what an architecture or work package must meet	Ch. 5.1.1 (p. 68)	Ch. 12.12 (pp. 539-547) Requirements Management; Ch. 20.1.1 (p. 784) requirements linked to goals
8	**Capability / business capability**: what the organization must be able to do	Ch. 5.1.1 (pp. 72-73)	Ch. 12.4.2 (p. 345) capability map in A; Ch. 12.5.2 (pp. 360-362) heat mapping; Ch. 3.1 (p. 35) capabilities change with the operating model
9	**Value stream**: how value is delivered	Ch. 5.1.2 (pp. 80-82)	Ch. 12.5.3 (pp. 379-382) Value Stream/Capability Matrix
10	**Baseline and Target Architecture**	Ch. 12.1 (p. 298)	Ch. 12.5-12.7 (B-D steps); Ch. 13.3.2 (pp. 576-577) baseline first or target first

Step	Concept	Defined in	Used in
11	**Gap** between states	Ch. 5.1.1 (p. 70)	Ch. 14.5 (pp. 617-622) gap analysis; Ch. 12.8.1 (pp. 465-466) consolidated in E
12	**Work package / initiative**: actions that close gaps	Ch. 5.1.1 (pp. 71-72)	Ch. 12.8.3 (pp. 486-490) Work Package Portfolio Map; Ch. 6.4 (p. 124) why it is needed
13	**Transition Architecture / plateau**	Ch. 12.8.1 (p. 472); Ch. 18.3 (p. 738)	Ch. 12.8.2 (pp. 482-484) Plateau Planning; Ch. 12.9.2 (pp. 508-511) State Evolution Table
14	**Architecture Roadmap**	Ch. 12.8.3 (pp. 485-493)	Ch. 12.9.1 (p. 504) finalized in F; Ch. 20.1.4 (pp. 795-796) case
15	**Implementation and Migration Plan**	Ch. 12.8.1 (pp. 473-474)	Ch. 12.9.1 (pp. 505-506) completed in F; Ch. 20.1.5 (p. 801) case
16	**Progress measurement**: work package and goal realization	Ch. 12.10.2 (pp. 522-528)	Ch. 19.3 (pp. 767-768) dashboards; Ch. 20.1.7 (p. 807) heat-mapped strategy

Key link to remember: Ch. 12.8.3 (p. 491): "A roadmap should never be created without linking business goals and objectives to the initiatives."

Thread 2: The Content Chain (what architecture is made of)

Level	Concept	Defined in	How it connects
Foundation	**Enterprise Metamodel**: 36 entities in 5 sections	Ch. 5.1 (pp. 63-65); Ch. 5.3 (p. 108)	Tailored in Preliminary (Ch. 5.2, p. 103; Ch. 12.3.1, p. 317)
Categorization	**Content Framework**, and its Extended form	Ch. 6.1 (p. 113); Ch. 6.3 (p. 120)	Realized by the metamodel. Maps sections to ADM phases (Ch. 6.3, pp. 118-119)
Smallest reusable unit	**Building block** (ABB / SBB)	Ch. 7.5.2 (p. 165); Ch. 7.5.2.3 (p. 170)	Built from entities. Specified in A-D, created via work packages in E (Ch. 7.5.2.2, p. 169)
Representation	**Catalog, map, diagram, matrix**	Ch. 7.4 (pp. 150-154)	Visualize building blocks
Product	**Artifact**	Ch. 3.2 (p. 39); Ch. 7.5.1 (pp. 155-163)	Listed per phase in Table 7-4 (Ch. 7.5.1) and in every Ch. 12 artifacts section
Package	**Deliverable** (e.g., Architecture Definition Document)	Ch. 7.5 (p. 154); Ch. 12.2 (pp. 300-301)	Contains artifacts
Store	**Architecture Repository**	Ch. 7.1-7.2 (pp. 128-136)	Holds blocks, metamodel, governance information
Lens	**Enterprise, Architecture, Solutions Continua**	Ch. 7.3 (pp. 136-149)	Classify repository assets from generic to specific
Communication	**Views and viewpoints**	Ch. 7.6 (pp. 176-178)	Reference Library. Address stakeholder concerns (Ch. 14.3, p. 602)

Chain to memorize: *entity, then building block, then artifact (catalog, map, diagram, matrix), then deliverable, stored in the repository* (Ch. 7.4, p. 150; Ch. 21.1, pp. 819-820).

Related patterns:

- **Service, then logical, then physical component** recurs in Data, Application, and Technology (Ch. 5.1.3-5.1.5, pp. 93-101). It parallels ABB (logical, technology-agnostic) vs. SBB (physical, product-aware) (Ch. 7.5.2.4-7.5.2.5, pp. 171-175).
- **Architecture patterns** are proven combinations of ABBs and SBBs (Ch. 14.4, pp. 616-617).
- The **Architecture Continuum** types match the **Solutions Continuum** types (Foundation, Common Systems, Industry, Organization-Specific) (Ch. 7.3.2-7.3.3, pp. 141-149).

Thread 3: People, Capability, and Governance

Concept	Defined in	Connected to
Architecture Capability: the ability to practice EA	Ch. 9.1 (p. 230); Ch. 1 (p. 4)	Created via the ADM (Ch. 9.2, Table 9-1). The Standard's structure mirrors it (Ch. 3.1, p. 33). A repository component (Ch. 7.2, p. 135)
Four Architecture Purpose Capabilities (strategy, portfolio, projects, solution delivery)	Ch. 9.3 (p. 237)	Map to roles (Ch. 10.3.1, p. 259). Map to landscape levels (Ch. 7.2, p. 130). CEO vs. CIO leadership (Ch. 8.3.1, pp. 206-207)
Positioning / reporting line	Ch. 9.3 (pp. 239-241)	Team composition (Ch. 12.3.1, pp. 314-315). Maturity guides it (Ch. 9.3, p. 239; Ch. 15)
Roles: Chief/Enterprise, Segment, Solution	Ch. 10.2 (pp. 251-255)	Domain scope (Ch. 11.3, pp. 290-292). RACI in the EA team (Ch. 12.3.1, Table 12-3, p. 315). Maturity needs several roles (Ch. 15.3, p. 698)
Competencies (skills + abilities + knowledge)	Ch. 10.4 (pp. 266-275)	Mapped to CMMI elements (Ch. 15.3, pp. 696-697)
Governance Framework	Ch. 8.1 (pp. 190-192)	Set up in Preliminary (Ch. 12.3.1, pp. 311-312). Agreed in Phase B of capability creation (Ch. 9.2, p. 234). Applied in Phase G (Ch. 12.10.1, p. 514)
Architecture Board	Ch. 8.3 (pp. 204-224)	Approves Architecture Principles (Ch. 14.2.4, p. 599). Oversees governance and the capability (Ch. 7.2, p. 136). Monitors change (Ch. 12.11.1, p. 536). Raises maturity (Ch. 8.3.3, p. 211; Ch. 15.2, p. 692). Healthcare composition (Ch. 17.2, p. 721)
Architecture Contract	Ch. 12.2 (pp. 301, 304)	Output of Phase G scope step (Ch. 12.10.1). Basis for execution (Ch. 20.1.6, p. 805)
Compliance	Ch. 8.2 (pp. 198-199)	Phase G reviews (Ch. 12.10.1, p. 519). Compliance Report in H (Ch. 12.11.1, p. 531). Ongoing in agile (Ch. 18.4.2, p. 749)
Governance Repository	Ch. 7.2 (p. 135)	Stores principles (Ch. 14.2.2, p. 596)

Key link: an Architecture Board of IT architects keeps the capability "in a perpetual state of reactive action" (Ch. 8.3, pp. 205-206). The same warning applies to a capability positioned too low (Ch. 9.3, p. 241).

Thread 4: Granularity and Partitioning (breaking the enterprise into pieces)

Idea	Where
Strategic / Segment / Capability Architectures (Architecture Landscape levels)	Defined Ch. 7.2 (pp. 130-131). Agile use in Ch. 18.2 (pp. 731-735)
Requirements per level (Strategic, Segment, Capability)	Ch. 7.2 (pp. 132-133)
Purposes of the capability map onto these levels (strategy, portfolio, projects, solution)	Ch. 9.3 (p. 237)
Segment as a horizontal (domain) or vertical (business pillar) slice	Ch. 10.3 (pp. 255-263)
Segment vs. Solution Architecture	Ch. 10.3.2 (pp. 261-262)
Architecture partitioning decided in Preliminary	Ch. 13.4 (pp. 580-583); Ch. 12.3.1 (p. 319)
Partitions = Minimum Viable Architectures, built in sprints	Ch. 18.1.1 (pp. 727-728); Ch. 18.3 (p. 736)
Partitioned Transition Architectures	Ch. 18.3 (pp. 737-739), building on plateaus in Ch. 12.8.2

Idea	Where
Granularity mapped to ADM phases and SAFe layers	Ch. 18.4.1 (pp. 740-742)
Complete EA covers all four domains, but scope can be partial with stated risks	Ch. 11.1 (pp. 285-286)

Thread 5: The Four Domains Everywhere

Where the domains appear	Ref
Defined: Business, Data, Application, Technology. Data + Application = Information Systems	Ch. 11.1 (pp. 280-281); Ch. 3.5 (p. 47)
As metamodel sections (19 business entities, 3 each for the rest)	Ch. 5.1.2-5.1.5
As Content Framework sections and ADM phases B, C, D	Ch. 6.3 (pp. 118-119); Ch. 12.5-12.7
As Segment Architect specializations	Ch. 10.3.1 (p. 259); Ch. 11.3 (p. 291)
As risk categories (business, information, application, technology)	Ch. 14.8.1 (p. 640)
As compliance checklists per domain	Ch. 8.2 (p. 199)
History: TOGAF 7 had Technology only, TOGAF 8 had four, with "Data or Information"	Ch. 11.1 (pp. 281-282); Ch. 2.2.2
Myth: "TOGAF is only IT" is refuted by the four domains	Ch. 22 (pp. 825-826)
Cross-cutting concerns (security, motivation, governance) span all four	Ch. 11.2 (pp. 288-289); security critique of ACMM in Ch. 15.1.1 (p. 681)

Thread 6: Stakeholders (the human thread)

Concept	Where
Stakeholder definition	Ch. 14.3 (pp. 602-603)
No stakeholder entity in the metamodel. Jager says add one	Ch. 5.2 (p. 104); Ch. 12.4.2 (pp. 336-338)
Organization unit acts as a stakeholder for goals	Ch. 5.1.2 (pp. 84-85)
Concerns = stakeholder-related drivers	Ch. 5.1.2 (p. 77)
Views and viewpoints address concerns	Ch. 7.6 (pp. 176-178)
Identified in Preliminary, analyzed in A, updated in every phase	Ch. 12.3.1 (p. 307); Ch. 12.4.1 (pp. 327-328); Ch. 14.3 (p. 603)
Stakeholder Catalog, Power Grid, Communications Plan	Ch. 12.4.2 (pp. 336-339); Ch. 14.3.1-14.3.3 (pp. 605-614)
Decisions belong to stakeholders, not the architect	Ch. 12.3.1 (p. 311)
Sponsorship before work starts. Board members represent stakeholders	Ch. 8.3.2 (p. 210); Ch. 8.3.4 (p. 213)
Stakeholder consensus in prioritizing migration	Ch. 12.9.1 (p. 502)
Alternatives and trade-offs reveal stakeholder agendas	Ch. 14.9 (p. 656)
Resistance is the biggest transformation challenge	Ch. 19.3 (p. 769); Ch. 20.1.2 (pp. 785-786)

Thread 7: Risk and Readiness

Concept	Where
Business Transformation Readiness Assessment (factors, 1-5 score, urgency/status/difficulty)	Ch. 14.7 (pp. 627-632)

Concept	Where
Readiness assessed in Preliminary, A, and E	Ch. 12.3.1 (p. 313); Ch. 12.4.1 (p. 329); Ch. 12.8.1 (pp. 468-469)
Risk management in A, E, F, G, H (not formally Preliminary or B-D)	Ch. 14.8 (pp. 632-634)
Initial vs. residual risk. Impact x frequency. Heat map	Ch. 14.8 (pp. 635-654)
Implementation Factor Catalog (risks, assumptions, dependencies)	Ch. 12.8.2 (pp. 478-480); Ch. 14.8.1 (p. 641)
Consolidated Gaps, Solutions, and Dependencies Matrix records risks	Ch. 12.8.2 (pp. 481-483)
Risk Management Plan (Phase F)	Ch. 12.9.1 (p. 503); Ch. 14.8.2 (p. 643)
Business Value and Risk Matrix	Ch. 12.9.2 (pp. 511-513); Ch. 19.3 (p. 767); Ch. 20.1.5 (p. 804)
Assumption and constraint entities	Ch. 5.1.1 (pp. 68-70)
Tailoring example: adding a risk entity and Risk Catalog	Ch. 20.1.1 (p. 784); Ch. 20.2 (p. 809)

Thread 8: Maturity

Concept	Where
ACMM vs. CMMI	Ch. 15.1 (pp. 670-689)
Maturity assessed in Preliminary and in Phase A of capability creation	Ch. 12.3.1 (pp. 312-313); Ch. 9.2 (p. 233)
Maturity guides positioning of the capability	Ch. 9.3 (p. 239)
The Architecture Board must never let maturity drop	Ch. 8.3.3 (p. 211)
Publishing artifacts raises maturity	Ch. 7.7.1 (p. 182)
Readiness factors can be assessed with maturity models	Ch. 14.7 (p. 628)
Phase H monitors capability maturity. Each ADM cycle matures governance criteria	Ch. 12.11.1 (pp. 531-532)
Tailoring to maturity (deliverables, governance)	Ch. 17.1 (pp. 715-717)
Competencies and roles needed to raise maturity	Ch. 15.3 (pp. 695-698); Ch. 10.4

Thread 9: Tailoring and Iteration (the flexibility thread)

Where tailoring or iteration appears	Ref
"Tailoring is a must"	Ch. 1 (p. 5); Ch. 3.6 (p. 52)
Modular adoption of the six documents	Ch. 3.2 (pp. 39-40)
Define EA for your organization	Ch. 4.3 (p. 61)
Tailor the metamodel (add or remove entities)	Ch. 5.2 (pp. 101-106)
Tailor the Content Framework. The ADM updates it	Ch. 6.4 (pp. 123-125)
Not all artifacts are required	Ch. 7.5.1 (pp. 155, 157)
Adapt the Governance Framework	Ch. 8.1 (p. 190)
Only the ADM parts that help the capability	Ch. 9.2 (p. 234)
Choose and tailor the framework in Preliminary	Ch. 12.3.1 (pp. 317-318)
The ADM is descriptive, with no fixed order and steps that can be skipped	Ch. 12 (p. 295); Ch. 12.13 (pp. 547-548)
Iteration ways and groups. Styles. Partitioning	Ch. 13.2-13.4
TC1 removed arrowheads to stress iteration	Ch. 2.2.2 (p. 25)

Where tailoring or iteration appears	Ref
Implementation Wheel as a tailored ADM	Ch. 16.2 (pp. 703-710)
Five tailoring areas. Healthcare case	Ch. 17.1-17.2
Agile sprint adaptations of E-H	Ch. 18.4.2 (pp. 744-754)
Case: skipped maturity, added risk entity	Ch. 20.2 (p. 809)
Myths "rigid" and "step by step"	Ch. 22 (pp. 825, 828)

Part 3: The ADM as the Backbone

Almost every concept in the book is used somewhere in the ADM. This table shows, phase by phase, which concepts from other chapters each phase pulls in.

Phase	Concepts used (defined in)	Techniques used (Ch. 14)	Key artifacts and documents	Also see
Preliminary (Ch. 12.3)	Architecture Capability (Ch. 9); Enterprise Metamodel (Ch. 5.2); Content Framework (Ch. 6.1); Governance Framework (Ch. 8.1); roles and RACI (Ch. 10, Ch. 8.2); maturity (Ch. 15); partitioning (Ch. 13.4.2)	Principles (14.2); readiness (14.7)	Request for Architecture Work; Principles Catalog	Capability creation (Ch. 9.2); TAFIM origin (Ch. 2.2.3)
A Vision (Ch. 12.4)	Drivers, goals, objectives (Ch. 5.1.2); business capability (Ch. 5.1.1); value stream (Ch. 5.1.2); views (Ch. 7.6)	Stakeholder Management (14.3); readiness (14.7); risk (14.8)	Statement of Architecture Work; Stakeholder Catalog; Solution Concept, Value Chain, Business Model Diagrams; Business Capability Map; Value Stream Map	Risks to the Statement of Architecture Work (Ch. 14.8, p. 632)
B Business (Ch. 12.5)	19 business entities (Ch. 5.1.2); ABBs (Ch. 7.5.2.4); Reference Library (Ch. 7.2)	Gap analysis (14.5); alternatives (14.9); interoperability (14.6, p. 624)	About 27 artifacts; ADD	Business Scenarios (Ch. 12.5.2); BIZBOK (Ch. 4.3, 11.1)
C Data/Application (Ch. 12.6)	Data and application entities (Ch. 5.1.3-5.1.4); Information Systems (Ch. 11.1)	Gap analysis; alternatives	CRUD matrix, Data Security, Application Portfolio (with CIA), Interface Catalog	Information concept (Ch. 5.1.2, Ch. 11.1)
D Technology (Ch. 12.7)	Technology entities (Ch. 5.1.5); Standards Library (Ch. 7.2)	Gap analysis; alternatives	Technology Standards and Portfolio Catalogs, platform diagrams	IT has separate planning in most organizations (Ch. 12.7.1, p. 442)
E Opportunities and Solutions (Ch. 12.8)	Gaps and work packages (Ch. 5.1.1); SBBs (Ch. 7.5.2.5); Transition Architectures; plateaus	Gap consolidation; interoperability (14.6); readiness (14.7); risk (14.8); alternatives (14.9)	Implementation Factor Catalog; Consolidated Gaps Matrix; Increments Table; Work Package Portfolio Map; Architecture Roadmap	Building blocks created here (Ch. 7.5.2.2, p. 169)
F Migration Planning (Ch. 12.9)	Four management frameworks (Ch. 16.1); Transition Architectures	Risk (14.8)	Implementation and Migration Plan; Business Value and Risk Matrix; State Evolution Table; Risk Management Plan	ADD finalized (Ch. 12.2, p. 304)

Phase	Concepts used (defined in)	Techniques used (Ch. 14)	Key artifacts and documents	Also see
G Implementation Governance (Ch. 12.10)	Governance Framework (Ch. 8); Architecture Contract; compliance	Risk monitoring (14.8.5)	Compliance assessments; progress dashboards	Ten governance steps (Ch. 8.2, p. 193)
H Change Management (Ch. 12.11)	Change management; maturity (Ch. 15); Architecture Board (Ch. 8)	Risk (14.8)	Compliance Report; new Request for Architecture Work (major change)	Triggers capability iteration (Ch. 13.3.1, p. 572)
Requirements Management (Ch. 12.12)	Requirement entity (Ch. 5.1.1); Architecture Requirements Repository (Ch. 7.2)	n/a	Requirements Catalog	"Mechanism, not a phase" (Ch. 6.1, pp. 111-112)

Iteration groups over the backbone (Ch. 13.3.2, pp. 573-574): Architecture Capability (Preliminary, A); Architecture Development (B-F); Transition Planning (E-F); Architecture Governance (G-H).

Agile overlay (Ch. 18.4.1, pp. 740-742): Strategic level (Preliminary, A) maps to strategic themes. Segment level (B-D) maps to epics. Capability level (E-H) maps to features and user stories.

Digital transformation overlay (Ch. 19.3, pp. 763-768): nine steps, one per ADM phase from Preliminary to H.

Implementation Wheel overlay (Ch. 16, pp. 707-710): Document (A, B, C), Define (Preliminary, A, B-D), Execute (E, F), Control (G, H).

Case overlay (Ch. 20.2, pp. 808-815): Jim's seven stages map to Preliminary through H.

Part 4: Commonly Confused Pairs

Pair	The difference	Refs
Enterprise Architecture vs. IT Architecture	EA is strategic and coordinates all domains. IT Architecture is technical	Ch. 4.2 (p. 57)
Capability vs. business capability	Business capability adds "to achieve a specific purpose"	Ch. 5.1.1 (p. 73)
Value stream vs. business process	Business model, intangible value vs. operating model, time-ordered steps	Ch. 5.1.2 (pp. 80-82)
Function vs. process	*What* is needed (broader) vs. *how* step by step	Ch. 5.1.2 (pp. 83-84)
Actor vs. organization unit	An actor can be a whole organization but not a department	Ch. 5.1.2 (p. 85)
Enterprise Metamodel vs. Content Framework	Detailed entities vs. high-level categorization mapped to the ADM	Ch. 6.1 (p. 113)
Content Framework vs. Extended Content Framework	Phase-level sections vs. entities shown per section	Ch. 6.3 (p. 120)
Architecture Repository vs. EA tool	Intangible concept vs. the tool that makes it tangible	Ch. 7.1 (p. 128); Ch. 7.7 (p. 179)
Architecture Landscape vs. Solutions Landscape	ABBs and levels of architecture vs. SBBs and Solution Architectures	Ch. 7.2 (pp. 130-132)
TOGAF Library vs. Reference Library	Guidance portfolio vs. repository class it supports	Ch. 3.4 (pp. 43-44)

Pair	The difference	Refs
Architecture Continuum vs. Solutions Continuum	Architecture assets vs. implemented solutions (same four types)	Ch. 7.3 (pp. 141-149)
Catalog vs. matrix vs. map vs. diagram	Unlinked list vs. cross-mapping vs. textual vs. graphical	Ch. 7.4 (pp. 151-153)
ABB vs. SBB	What and why (agnostic) vs. how (product-aware)	Ch. 7.5.2.3 (p. 170)
View vs. viewpoint	What you show vs. the rules for creating it	Ch. 7.6 (pp. 176-177)
Artifact vs. deliverable	A deliverable contains one or more artifacts	Ch. 7.4 (p. 150)
Job vs. role vs. assignment	Contract position vs. activities and skills vs. specific task	Ch. 10.1 (p. 248)
Horizontal vs. vertical segment	By domain vs. by business pillar	Ch. 10.3 (pp. 255-257)
Domain vs. layer	Area of concern vs. level of abstraction inside a system	Ch. 11.2 (pp. 287-289)
Statement of Architecture Work vs. Architecture Contract	Scope and plan agreed in A vs. delivery and quality agreement for implementation	Ch. 12.2 (pp. 301, 304)
Enterprise Principle vs. Architecture Principle	Organization-wide, board-approved vs. architecture-specific, Architecture Board-approved	Ch. 14.2 (pp. 592-599)
Initial vs. residual risk	Before vs. after mitigation	Ch. 14.8 (pp. 635-636)
Three ways to iterate vs. four iteration groups	Whole cycle, within cycle, capability vs. Capability, Development, Transition Planning, Governance	Ch. 13.3.1-13.3.2
ACMM vs. CMMI	Nine IT-oriented elements, levels 0-5 vs. five strategic elements, levels 1-5	Ch. 15.1
Minimum Viable Architecture vs. Minimum Viable Product	Least architecture that adds value vs. least deliverable output	Ch. 18.1.1 (p. 728); Ch. 18.4.1 (p. 742)
Digitization vs. digitalization vs. digital transformation	Convert to digital vs. improve processes vs. reinvent the business model	Ch. 19.2 (p. 760)

Part 5: Concept Index (A-Z)

Concept	Defined	Also used in
ACMM	Ch. 15.1.1 (pp. 670-681)	Ch. 12.3.1 (p. 312); Ch. 11.2 (p. 288)
ADM (Architecture Development Method)	Ch. 12.1 (pp. 296-300)	Ch. 3.1-3.2; Ch. 9.2; Ch. 13; Ch. 18.4; Ch. 19.3; Ch. 20.2; Ch. 21.1
Agile / sprint	Ch. 18.1 (pp. 726-728)	Ch. 3.3 (p. 42); Ch. 12.13 (p. 548); Ch. 17.1 (p. 715)
Architecture Alternatives and Trade-Offs	Ch. 14.9 (pp. 656-662)	Ch. 12.5.1 (p. 353); Ch. 12.8.1 (p. 464); Ch. 13.3.1 (pp. 570-571)
Architecture Board	Ch. 8.3 (pp. 204-224)	Ch. 7.2 (p. 136); Ch. 14.2.4 (p. 599); Ch. 15.2 (p. 692); Ch. 17.2 (p. 721)
Architecture Building Block (ABB)	Ch. 7.5.2.4 (pp. 171-173)	Ch. 12.4.1 (p. 324); Ch. 12.8.1 (p. 460); Ch. 14.5 (p. 621)
Architecture Capability	Ch. 9.1 (p. 230)	Ch. 1 (p. 4); Ch. 3.1 (p. 33); Ch. 7.2 (p. 135); Ch. 12.3
Architecture Contract	Ch. 12.2 (pp. 301, 304)	Ch. 12.10.1 (p. 514); Ch. 12.11.1 (p. 530); Ch. 20.1.6
Architecture Definition Document	Ch. 12.2 (pp. 301, 303)	Ch. 7.5 (p. 154); Ch. 12.5.1 (pp. 358-359); Ch. 20.1.4
Architecture Landscape (Strategic/Segment/Capability)	Ch. 7.2 (pp. 130-131)	Ch. 18.2; Ch. 9.3; Ch. 10.3
Architecture partitioning	Ch. 13.4 (pp. 580-583)	Ch. 18.1.1, 18.3
Architecture pattern	Ch. 14.4 (pp. 616-617)	Ch. 7.5.2.4 (p. 173), stored in the Reference Library

Concept	Defined	Also used in
Architecture Principles	Ch. 14.2.4 (pp. 599-601)	Ch. 5.1.1 (p. 68); Ch. 12.3.1 (p. 316); Ch. 12.3.2
Architecture Repository	Ch. 7.1-7.2 (pp. 128-136)	Ch. 8.1 (p. 192); Ch. 21.1; Ch. 22 (p. 827)
Architecture Requirements Repository	Ch. 7.2 (pp. 132-134)	Ch. 12.12.1 (p. 542)
Architecture Roadmap	Ch. 12.8.3 (pp. 485-493)	Ch. 6.4 (p. 124); Ch. 12.9.1 (p. 504); Ch. 20.1.4
Artifact	Ch. 7.5.1 (pp. 155-163)	Ch. 3.2 (p. 39); every Ch. 12 artifacts section
BIZBOK Guide	Ch. 2.2.2 (p. 24)	Ch. 4.3 (p. 60); Ch. 5.1.2 (p. 87); Ch. 11.1 (p. 283)
Building block	Ch. 7.5.2 (pp. 163-175)	Ch. 2.2.1 (p. 18); Ch. 3.2 (p. 38); Ch. 21.1
Business capability	Ch. 5.1.1 (p. 73)	Ch. 3.1 (p. 34); Ch. 12.4.2 (p. 345); Ch. 12.5.2 (pp. 360-362)
Business service	Ch. 5.1.2 (p. 91)	Ch. 5.1.3 (p. 93); Ch. 12.5.3 (pp. 372-374)
Business Transformation Readiness Assessment	Ch. 14.7 (pp. 627-632)	Ch. 12.3.1 (p. 313); Ch. 12.4.1 (p. 329); Ch. 12.8.1 (p. 468)
Capability (general entity)	Ch. 5.1.1 (p. 72)	Ch. 9.1 (p. 230)
CMMI	Ch. 15.1.2 (pp. 681-689)	Ch. 12.3.1 (p. 313); Ch. 15.2-15.3
Communications Plan	Ch. 14.3.3 (pp. 611-614)	Ch. 8.2 (p. 202); Ch. 12.4.1 (p. 328)
Competency	Ch. 10.4 (p. 266)	Ch. 15.3 (pp. 695-698)
Content Framework	Ch. 6.1 (pp. 111-114)	Ch. 5.2; Ch. 12.3.1 (p. 317); Ch. 17.1; Ch. 21.1
Continua (Enterprise / Architecture / Solutions)	Ch. 7.3 (pp. 136-149)	Ch. 3.2 (p. 39); Ch. 12.2 (p. 304)
Course of action	Ch. 5.1.2 (p. 79)	Ch. 18.4.1 (p. 741)
Digital transformation	Ch. 19.1 (pp. 758-759)	Ch. 3.1 (pp. 34-35); Ch. 3.5 (p. 48)
Domains (four)	Ch. 11.1 (pp. 280-286)	Ch. 3.5 (p. 47); Ch. 5.1; Ch. 22 (p. 826)
Driver / goal / objective / measure	Ch. 5.1.2 (pp. 77-80)	Ch. 12.3.1 (p. 308); Ch. 12.5.3 (p. 371); Ch. 20.1.1
Enterprise Architecture (definitions)	Ch. 4.1, 4.3 (pp. 54-61)	Ch. 2.1 (p. 16); Ch. 15.1.2 (p. 683)
Enterprise Metamodel	Ch. 5.1 (pp. 63-65)	Ch. 6.1; Ch. 7.2 (p. 129); Ch. 12.3.1 (p. 317); Ch. 21.1
Enterprise Principles	Ch. 14.2.3 (pp. 597-599)	Ch. 12.3.2 (p. 320)
Gap / gap analysis	Ch. 5.1.1 (p. 70); Ch. 14.5 (pp. 617-622)	Ch. 12.5.1 (p. 353); Ch. 12.8.1 (p. 465)
Governance Framework	Ch. 8.1 (pp. 190-192)	Ch. 12.3.1 (p. 311); Ch. 12.10.1 (p. 514); Ch. 21.1
Implementation Factor Catalog	Ch. 12.8.2 (pp. 478-480)	Ch. 14.8.1 (p. 641); Ch. 20.1.5
Implementation Wheel	Ch. 16.2 (pp. 703-706)	Ch. 17.1 (p. 716)
Interoperability (degrees 1-4)	Ch. 14.6 (pp. 623-627)	Ch. 12.8.1 (p. 466); Ch. 18.4.2 (p. 747)
Iteration	Ch. 13.3 (pp. 564-580)	Ch. 2.2.2 (p. 25); Ch. 12.13 (p. 548)
Minimum Viable Architecture	Ch. 18.1.1 (p. 728)	Ch. 18.3, 18.4.2
Requirements Management	Ch. 12.12 (pp. 539-547)	Ch. 6.1 (pp. 111-112); Ch. 9.2 (p. 236)
Risk management	Ch. 14.8 (pp. 632-656)	Ch. 12.4.1 (p. 333); Ch. 12.9.1 (p. 503); Ch. 20.1.5
Roles (Chief/Enterprise/Segment/Solution)	Ch. 10.2 (pp. 249-255)	Ch. 8.1 (p. 191); Ch. 11.3; Ch. 15.3
Series Guides	Ch. 3.3 (pp. 40-42)	Ch. 1 (p. 3)
Solution Building Block (SBB)	Ch. 7.5.2.5 (pp. 173-175)	Ch. 12.8.1 (p. 460); Ch. 12.9.2 (p. 509)

Concept	Defined	Also used in
Stakeholder / Stakeholder Management	Ch. 14.3 (pp. 601-615)	Ch. 5.2 (p. 104); Ch. 12.4.2 (p. 336)
Statement of Architecture Work	Ch. 12.2 (pp. 301, 303)	Ch. 12.4.1 (pp. 325-335); Ch. 20.1.2
Tailoring	Ch. 17.1 (pp. 714-718)	Ch. 1 (p. 5); Ch. 3.6; Ch. 5.2; Ch. 6.4; Ch. 12.3.1; Ch. 20.2
TOGAF Library	Ch. 3.4 (pp. 43-45)	Ch. 2.2.2 (p. 20); Ch. 12.3.1 (p. 308)
Transition Architecture	Ch. 12.8.1 (p. 472); Ch. 18.3 (p. 738)	Ch. 12.9.2; Ch. 20.1.4
Value stream	Ch. 5.1.2 (pp. 80-83)	Ch. 12.4.2 (p. 346); Ch. 12.5.2 (p. 362)
Views / viewpoints	Ch. 7.6 (pp. 176-178)	Ch. 6.2 (p. 116); Ch. 14.3 (p. 602)
Work package	Ch. 5.1.1 (pp. 71-72)	Ch. 6.4 (p. 124); Ch. 12.8.3 (pp. 486-490); Ch. 14.5
Work Package Portfolio Map	Ch. 12.8.3 (pp. 488-490)	Ch. 6.4 (p. 124); Ch. 12.9.1 (p. 499); Ch. 19.3 (p. 765)

Part 6: Linking Questions

These questions need two or more chapters to answer. The answers name the chapters to combine.

Q: Trace how a new law becomes an item on an Architecture Roadmap.

A: The law is a *driver* (Ch. 5.1.2, p. 77). It becomes a goal and a SMART objective with a measure (Ch. 5.1.2, Fig. 5-6, p. 79), validated in Phase A (Ch. 12.4.1). B-D find the gaps between baseline and target (Ch. 12.5.1; Ch. 14.5). Gaps become work packages (Ch. 5.1.1, p. 71) in a Work Package Portfolio Map linked to the objective (Ch. 12.8.3, pp. 488-489). These are plotted on the Architecture Roadmap (Ch. 12.8.3, p. 492), finalized in F (Ch. 12.9.1), and tracked in G (Ch. 12.10.2).

Q: Why does the Preliminary Phase matter for the Enterprise Metamodel, the Content Framework, and governance?

A: All three are tailored or set up there: the organization-specific metamodel (Ch. 5.2, p. 103), the categorization framework and artifacts (Ch. 6.1, p. 112), and the Governance Framework (Ch. 12.3.1, pp. 311-312). This is the first ADM iteration, which builds the Architecture Capability (Ch. 9.2; Ch. 13.3.2, p. 573).

Q: How do the Architecture Landscape levels, the capability purposes, and the roles line up?

A: Strategic Architecture, support strategy, Chief/Enterprise Architect. Segment Architecture, support portfolio or projects, Segment Architect. Capability or solution level, support solution delivery, Solution Architect (Ch. 7.2, p. 130; Ch. 9.3, p. 237; Ch. 10.3.1, p. 259). Chapter 18.2 reuses the same levels for agile.

Q: Connect the stakeholder entity debate to three other places in the book.

A: Jager wants a stakeholder entity (Ch. 5.2, p. 104). The Stakeholder Catalog has no entity because of sensitivity (Ch. 12.4.2, p. 336). Stakeholder Management needs it for the Power Grid and Communications Plan (Ch. 14.3). Adding it aligns TOGAF with ArchiMate (Ch. 5.2, p. 104; Ch. 17.1, p. 716).

Q: How do ABBs and SBBs move through the ADM?

A: Candidate ABBs are modelled in A (e.g., a capability map). Specified, reused, or removed in B-D. Missing blocks get work packages in E. ABBs are refined into SBBs to buy or build (Ch. 7.5.2.2, p. 169; Ch. 12.8.1, p. 460). SBBs appear in the State Evolution Table in F (Ch. 12.9.2, p. 509). Both are stored in the repository (Ch. 7.5.2.4-7.5.2.5).

Q: Where does risk enter the ADM, and which artifacts carry it?

A: Phase A records high-level risks in the Statement of Architecture Work (Ch. 14.8, p. 632). E captures them in the Implementation Factor Catalog and Consolidated Gaps Matrix (Ch. 12.8.2). F produces the Risk Management Plan and Business Value and Risk Matrix (Ch. 12.9). G monitors the Risk Identification and Mitigation Matrix (Ch. 14.8.5). H monitors risks of change (Ch. 12.11.1).

Q: Show how "tailoring" connects Chapters 1, 5, 12, 17, and 20.

A: Ch. 1 says tailoring is a must (p. 5). Ch. 5.2 tailors the metamodel (pp. 101-106). Ch. 12.3.1 tailors the framework, ADM, and Content Framework in Preliminary (pp. 317-318). Ch. 17 lists five tailoring areas (p. 714). Ch. 20 shows real tailoring choices: skipped maturity assessment, added risk entity (p. 809).

Q: How do governance (Ch. 8) and the ADM phases G and H connect?

A: Phase G puts the governance approach into practice (Ch. 8.2, p. 193; Ch. 12.10.1, p. 514). The board's control mechanism happens in G, and recognizing divergence happens in H (Ch. 8.3.3, pp. 212-213). Phase H uses the governance framework and Architecture Contract to decide between a minor update and a new ADM cycle (Ch. 12.11.1, pp. 530-531).

Q: How does Chapter 21's one-page map summarize Chapters 5-12?

A: It connects the metamodel (Ch. 5), Content Framework (Ch. 6), repository and building blocks (Ch. 7), governance (Ch. 8), roles (Ch. 10), domains (Ch. 11), and the ADM (Ch. 12) through 13 relationships (Ch. 21.1, pp. 818-821).

Q: Which concepts make TOGAF work in agile settings, and where do they come from?

A: Architecture partitioning (Ch. 13.4), the three granularity levels (Ch. 7.2), Transition Architectures and plateaus (Ch. 12.8), and iteration (Ch. 13.3). They are combined in Ch. 18 into Minimum Viable Architectures delivered in sprints (Ch. 18.1-18.4).
