

2nd Round of Interview

- As per the UA&P Student Handbook on Mentoring:
 - Supplement quality education and integral formation for students
- Goals:
 - To inform, orient, and guide students throughout their student and civilian life
 - To imbue them with university educational principles
 - To create desirable habits and lead growth
- 2 Employees:
 - One handles monitoring (Ms. Kelai)
 - Reports the policies
 - The other handles mentor training
- The IT Office already linked the 2 Google Sheets!
 - They only handle the creation of the forms and sheets; management is handled by the Mentoring unit
- SMART Goals:
 - Pair students with competent mentors
 - For students to follow the new policy
- Training is in collaboration with HR
 - Part of HR's development program for Staff and Faculty
 - IDP (Institutional Development Program)
 - MDP (Mentor Development Program)
- Mentor Eligibility Criteria
 - Familiarity with the program
 - Academic and Professional background
 - Internal Score card — Strictly confidential
 - As such, they could not give full details on this
- Sourcing External Mentors
 - Done through referrals with people who have experience with the University, such as:
 - Alumni
 - Speakers
 - Old professors
 - Former employees
- Strategies that the unit employs to get students to participate in the program

- Mentoring Month
- Mentoring Space
- Meet your Mentor
- Pilot Mentoring Study
- NOTE: Most of this might be conducted this second semester as they are currently focusing on the facilitation of the new policy
- Drivers
 - The Mentoring Program is one of the University's main programs
 - Not many universities have the same
 - It is a unique program—CHED does not include this
- Definition of Holistic Development/Formation
 - CSA's Definition
 - Focuses on the personal and professional life of students
 - Aims for students to acquire strengthened intellectual and moral skills
 - Life skills essentially
 - The CSA is essentially the guardian of the students' value chain
 - Cultivation of university life outside the classroom as an effective complement to their courses
- Criteria for “Holistically Developed” Individuals
 - This is a hard question to answer, according to them
 - Students will be:
 - Upstanding individuals when they leave the university
 - “Upstanding” will depend on the student
- Next step after implementing and managing the new policy: Improve the mentoring relationship between student and mentor
- If the unit is gone:
 - The mentoring program is either gone or will be handled by the schools on their own
 - The existence of the unit is for the uniformity and centralization of the program across all schools
- Student participation used to be voluntary
 - Why it is no longer voluntary is because of the University's new President
 - They are invested in the program
 - They want to see its value in action

- And to let students see the program's value as well
- What is their value
 - Guidance for students
 - Mentoring comes in before students face any detrimental problems. These include:
 - Personal crisis, explorations of different professional paths, etc.
 - The Mentors offer guidance on these matters
 - The unit wants Mentors (?) to challenge students and nurture them
- If in the future, they want:
 - The program to be strong and something that students can enjoy
- Strategic direction
 - Handled by the CSA operations committee and management committee, in collaboration with the other schools
- What do the Google Forms identify:
 - Frequency of the mentoring session
 - Quality and evaluation of the mentoring
 - Before, they just sent out individual Google Forms to Mentors and mentees
- Red Flags
 - No mentoring logs
 - Both before and after the implementation of the policy
 - They also want better control of perspective from group mentoring
 - According to them, there are instances of mentors facilitating group mentoring with multiple students. However, there is no data on this
- Hallmarks
 - They want participation and data from the mentoring program to be a claim that the program is effective and the University is good
- If they have 100% student participation, the University will have a better image and can claim or backup that their programs are really effective
 - They want this to be known internationally through International Mentoring Holding Conferences
 - To set themselves apart from other universities essentially
- What does the unit lack
 - Birthing gaming pairs (????) (IDK what I wrote here)

- The new policy is implemented well + database accuracy and is “sound”
- Biggest Problem right now:
 - So many students are now requesting to change their mentors
 - Their current process involves a ton of emails to different people (current mentor, new mentor, and school)
- On Mentoring Pairing Change Criteria:
 - Depends on the school
 - They usually want mentors from their own school to be paired with their students
 - On evaluation, it depends on the availability and capacity of the requested mentor
 - Some mentors can manage more students than others, while others cannot
 - They are of course NOT independent of Mancom (???)
- How they manage school independence
 - They have internal processes that do not require the schools' input. Such as:
 - Internal decisions on how to pair the students ???
 - Decisions on the recording of mentoring sessions
 - Mentor development programs
 - Soft skills development programs for mentors
 - Mentoring approval score card (again, this is confidential)
 - Their interaction with the schools is purely collaborative
 - There is a strike of balance between the preferences of the school and the implementation of the unit's own processes
- On Mentor Evaluation
 - They get their info on them from different sources:
 - Students
 - The University's management committee
 - Operations
 - Faculty and Staff
 - “Bad” mentors are no longer engaged for the next school year
- There are so **MANY MOVING PARTS** for pairing students
 - As such, it is really hard to stay static for it is a dynamic process
- They do not have any processes or strategies to prevent mentor changes

- What they do want is an automated mentor-student matching process
 - Students have to get matched with the right mentor for them
- Risks:
 - They are dependent on schools for the mentoring pairings
 - Enrolment provides the list of enrolled students
 - Logging of sessions
 - They're not sure if students will be able to properly log all of their sessions
 - Availability of mentors
 - The Policy
- There is no strategy to address these risks
 - What they do want is just to start their business earlier in the semester
 - To identify pairs that point to accurate and better experiences
- The 3 mandatory mentoring sessions are NON-NEGOTIABLE
 - But they are currently checking if it is effective
 - To be seen in the world and the semester
- Centralized data collection and recording is another thing they want
- How do mentors get selected under the development program
 - The unit invites them
 - Different mentors for different development programs
- They have 4-5 MDPs
 - 5 were implemented last year without the policy implementation
 - These depend on the topic and goals of the sessions
- They also want positive evaluation from mentors and students
- What we can explore:
 - Job matching applied to student-mentor pairings
