

Corrections on the proposal/paper

- **There are 2 things that you need to know**
 - Know the Business: The WHY
 - Most of our papers are on the HOW
 - This is what the subject is about naman. But that is not what sir is looking for
 - We need to understand the business.
 - Not the problems
 - The strategy and WHY DO THEY EXIST
 - From knowing the strategy, we execute it
 - Change mindset to strategy!!
 - What drives the company
 - “What do they want to happen?”
- Look at what they have:
 - Data
 - Business
 - Tech
 - Apps
- **Applying to Mentoring:**
 - Why do they exist?
 - They are mandated by the policies of the University
 - How do they provide mentoring? (strategy)
 - They get mentors (professors) from different schools or external
 - Q: Do they train them????
 - Have the different schools assign them to students
 - What probs do they have?
 - Not many students are participating in the program
 - Q: How do they solve this (strategy)
 - Implement new policy: mandatory 3 mentoring sessions per semester with consequences
 - How are student mentoring sessions being monitored?
 - Force students to answer a Google Form
 - Mentor confirmation workflow
 - Google sheets (database)
 - What happens if they fail to answer them?
 - Consequences for next semester
 - How do they ensure data integrity
 - Manual checking. . . .
 - What other drivers:
 - To NOT force students to attend mentoring
 - Wait why is this an issue??????? What are the consequences for them for not having students do mentoring?
 - Is it because they are losing money? (them paying mentors?)

-
-
-
- goal, business, purpose of the unit.
 - technology will only come after strategy, capability, and gaps
- look at 4 architectures → what their target is for each architecture that ultimately moves them from point A to B.
- know business, what they have, what they want →
- given the problem, you have to backtrack: “pathfinding”
